n=No. of responses
 av.=Mean
 md=Median
 dev.=Std. Dev.
 ab.=Abstention

1. Student Feedback for F2022-DS-201-2 [Bernard Lidicky (lidicky)] (Lecture)

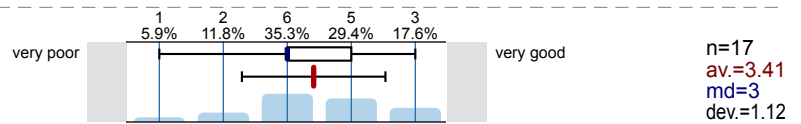

- 1.4) What helped your learning the most in this course?
- Application of learning through homeworks
 - I found the online class was more helpful than the in-person part. I felt the in-person lectures in the first few weeks were not very helpful. This caused me to not attend in person lectures and just watch videos online.
 - I really liked the labs and homework as they went over the important things we needed to know for the course.
 - Not much, throughout this whole course, I feel like I've been struggling to keep up.
 - The Labs were the most beneficial.
 - The PowerPoint slides
 - The lab sections helped me learn in this class the most. It gave me the skills to be able to manipulate data using both Excel and Python.
 - The labs and being able to be walked through all of the work that was being taught in class.
 - The labs were really helpful in learning the material
 - What helped my learning the most was my past history in coding and the Labs. Class was hard because of accent.
 - lab, and the homework
 - labs

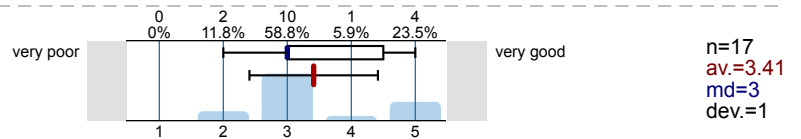

- 1.5) What changes could have been made to enhance your learning in this course?
- As a student, I simply did not feel much incentive to go to class. I often got bored in class and didn't feel like I was missing much if I was absent. Some incentive to get students to keep going to class would help the class out.

- I found the lectures not very helpful I learned most of the content from homework assignments or the labs
- I wish they would've gone over why certain code did what it did instead of just running through it.
- It was really hard to learn anything in the actual class, and everything I learned was either because I looked it up or it was in the lab. Joel Jeffries was very helpful.
- Make the upload consistent!! it was EXTREMELY annoying trying to figure out how they wanted the file uploaded for that specific assignment. I also think that there should be more of an intro to using python. I never used python and I struggled to keep up and understand.
- More interactive learning modules
- More interactive lectures
- N/A
- The course structure for this class is extremely confusing and messy. I don't believe full responsibility of this lies on Professor Lidicky since I know he wasn't the only coordinator. However, we had no textbook reference or general reference for any of the coursework. The instructions for assignments were regularly unclear and confusing (more often than not). I personally feel that we weren't taught very much in this class. Instead, we were provided with videos on how to do everything word for word which did not create a conducive learning environment. As a result, when we were provided assignments with no support on how to complete them, me and my peers all felt lost and stressed out. This course is in serious need of reorganization.
- more machine learning
- read the textbook more and spend more time on the class.
- the example on the powerpoint

1.6) My overall rating of this course is:

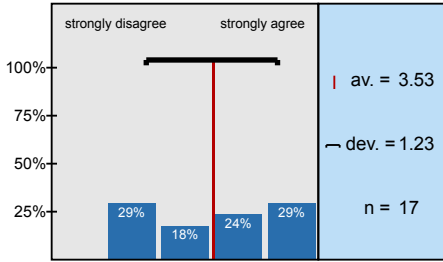

1.7) My overall rating of the instructor is:

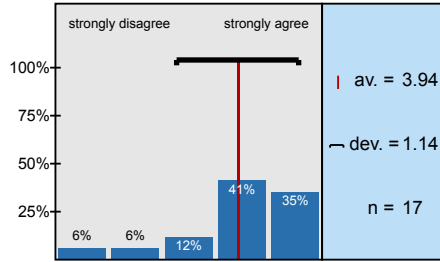

Histogram for scaled questions

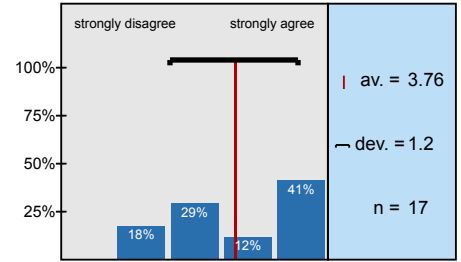

The instructor provided feedback on my academic work that was helpful to my learning.

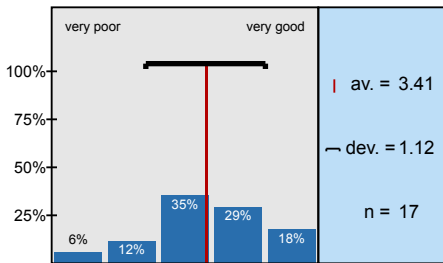

The instructor assisted me when I had questions regarding course content during the semester.

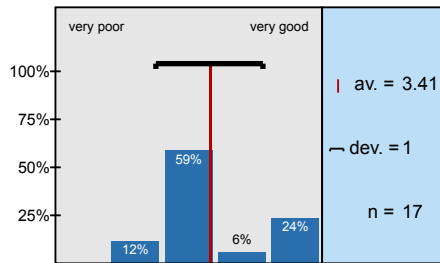

The instructor established an environment that was conducive to learning.

My overall rating of this course is:

My overall rating of the instructor is:
